

IV Drip Glutathione Benefits

What is Glutathione?

Glutathione is a peptide that is naturally produced and found in every cell of the human body, including immune cells. Made up of three essential amino acids (cysteine, glutamate, and glycine), it is often referred to as the master detoxifier for its incredible ability to promote skin health, body function, overall mood and well-being.

- Cysteine: important for making protein & other metabolic functions. Main protein in hair, skin, and nails. Important for creating collagen
- Glutamate: neurotransmitter that is important for learning and memory
- Glycine: neurotransmitter that stimulates the nervous system affecting cognition, mood, appetite, digestion, immune function, pain perception, and sleep

What it Glutathione used for?

- Improving immune function and helping to fight disease
- Lightening and brightening skin by erasing hyper-pigmentation and inhibiting melanin production in cells
- Reducing inflammation
- Helping your body break down and purge fat
- Promoting high energy and mental clarity
- Providing anti-aging properties

- Painful joints
- Mood instability or depression

There are also many chronic health conditions which are associated with low glutathione levels. Autoimmune disorders, fibromyalgia, heart disease, skin disorders, and many other conditions are associated with low levels of glutathione, and many prescription medications to treat these conditions can further deplete these levels.

Is Glutathione IV infusion therapy better than oral supplements?

An IV infusion of glutathione delivers the powerful antioxidant directly into your bloodstream, bypassing the digestive tract where adequate absorption is not a guarantee.

Are there any side effects of Glutathione treatment?

Intravenous (IV) glutathione infusion bypasses the digestive tract altogether, delivering the master antioxidant directly to your cells. The vast majority of patients receiving IV glutathione treatment have no side effects at all. If you are pregnant or breastfeeding, it is best to check with your doctor.

How long does it take and how often should you do it?

Glutathione IV infusions take 30 minutes to complete and can be done one to two times per week. It could take up to two weeks to feel benefits of Glutathione infusion, although you may feel benefits after initial IV. It is suggested that 1-10 IV therapies.
