

## IV Drip Immune Plus

### What is Immune IV Therapy?

The human body actively seeks to acquire and maintain a normal balance of vitamins and minerals. When they are not available in sufficient quantities the body will absorb heavy metals such as lead, mercury, and others.

Because heavy metals and minerals have a very similar chemical structure, the body will grab the undesirable heavy metals from our environment when minerals are not available. This provides another strong reason to have a healthy balance of minerals in the body. The lack of these vital elements of health, the immune system is weakened and can lead to many health problems.

### What does the Immune Plus Therapy Contain?

- **B-Complex:** B vitamins have a direct impact on your energy levels, brain function, and cell metabolism. Vitamin B complex helps prevent infections and helps support or promote: cell health.
- **B5:** helps produce energy by breaking down fats and carbohydrates. It also promotes healthy skin, hair, eyes, and liver
- **B-12:** a nutrient that helps keep your body's blood and nerve cells healthy and helps make DNA, the genetic material in all of your cells
- **Calcium:** helps in tooth and bone formation, heart rhythm, blood clotting, the metabolism of cells, and the functioning of the nervous system
- **Hyaluronic Acid:** well known for its skin benefits, especially alleviating dry skin, reducing the appearance of fine lines and wrinkles and speeding up wound healing. It can also help relieve joint pain
- **Magnesium:** this mineral is involved in the formation of bone, the metabolism of carbohydrates, vitamins, amino acids, and calcium. It also helps regulate blood pressure and aids in muscle function
- **Potassium Chloride:** Potassium can help regulate blood pressure levels, assist with nerve transmission, affect cardiovascular health, bone and muscle strength, and much more
- **Sodium:** regulates the balance of water throughout the body. Sodium is involved in the transfer of material through cell membrane, muscle function, digestion, and nerve coordination
- **Vitamin C:** aids in the growth and repairment of all tissues. It's involved in many body functions, including formation of collagen, absorption of iron, the proper functioning of the immune system, wound healing, and the maintenance of cartilage, bones, and teeth
